Building a Safer Industry One Member at a Time!

Topic: New Lead Standard for Renovation, Repair & Painting: Sorting it Out

You have probably heard about this new law, but confusion remains within the construction industry.

- When does this rule come into effect?*
- Does it apply to my business?*
- What type of project is this law applicable?*
- Who within my company should be certified?*
- Where do we go to get certified?*
- My company has already participated in a lead certification course, do we need to get EPA Lead Certified?*

If you don't know the answers to these questions, you can't afford to miss this informative session.

Guest Speaker: Michael Sharp, HMS, Inc.

Mr. Sharp has over 25 years of experience in asbestos abatement and lead remediation projects. He is an EPA Accredited Building Inspector, Management Planner, Contractor Supervisor and Project Designer, a Cal/OSHA Certified Asbestos Consultant and a California Department of Public Health Certified Lead Inspector, Risk Assessor, Project Supervisor and Project Monitor. He is a graduate of Chico State.

Mr. Sharp has been with HMS, Inc. since its inception in 1984. He is an instructor at UC Berkeley's Center for Occupational and Environmental Health's Asbestos and Lead Paint Training Program. Mr. Sharp travels the States of California and Nevada teaching the initial and refresher Asbestos Hazard Emergency Response Act courses (Contractor Supervisor, Building Inspector/Management Planner, and Project Designer), Cal/OSHA asbestos-disturbance and lead-disturbance in construction compliance courses, and mold awareness and remediation courses for contractors handling these materials on construction projects. He has also developed and conducts asbestos, lead and mold training courses for Architects, Construction Managers, and Building Owners as well.
